8 guides. Regenerate: `node scripts/customer-docs/generate-guide-index.mjs` .

---

# Configure

---

## Purpose

Create or delete topics/subscriptions. Show setup guide link available here.

## When to use it

- Open **Configure** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Configure** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Configure**.
3. Complete the on-screen fields / actions for this surface (Create or delete topics/subscriptions. Show setup guide link available here.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail**: Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success**: Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .

# Live demo

---

## Purpose

Publish → pull → ack against the real gateway. Generate Demo catalog first if the topic is missing.

## When to use it

- Open **Live demo** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Live demo** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Live demo**.
3. Complete the on-screen fields / actions for this surface (Publish → pull → ack against the real gateway. Generate Demo catalog first if the topic is missing.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail**: Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success**: Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .

# Generate

---

## Purpose

Seed Demo or Farm catalogs into memory so Demo and Tests have topics to use.

## When to use it

- Open **Generate** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Generate** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Generate**.
3. Complete the on-screen fields / actions for this surface (Seed Demo or Farm catalogs into memory so Demo and Tests have topics to use.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail**: Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success**: Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .

# Incoming

---

## Purpose

Publish JSON payloads into a selected topic.

## When to use it

- Open **Incoming** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Incoming** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Incoming**.
3. Complete the on-screen fields / actions for this surface (Publish JSON payloads into a selected topic.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail:** Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success:** Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .

# Logs

---

## Purpose

Tail gateway logs with level/text filters.

## When to use it

- Open **Logs** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Logs** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Logs**.
3. Complete the on-screen fields / actions for this surface (Tail gateway logs with level/text filters.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail:** Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success:** Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .

# Outgoing

---

## Purpose

Pull deliveries, enable live receive, ack messages.

## When to use it

- Open **Outgoing** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Outgoing** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Outgoing**.
3. Complete the on-screen fields / actions for this surface (Pull deliveries, enable live receive, ack messages.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail:** Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.

# Stored

---

## Purpose

Peek topic message counts and payloads without consuming. Empty state can reopen the setup guide.

## When to use it

- Open **Stored** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Stored** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Stored**.
3. Complete the on-screen fields / actions for this surface (Peek topic message counts and payloads without consuming. Empty state can reopen the setup guide.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail**: Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success**: Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .

# Tests

---

## Purpose

Run healthz, smoke, and conformance from the browser.

## When to use it

- Open **Tests** when the job matches this screen
- Prefer the product home / Get started panel if you are unsure where to begin
- Confirm health and auth tokens if probes fail

## How to get there

- UI path: `/ui/` → **Tests** (or matching nav tab)
- Spotlight / in-app links when available

## Operate from the console (UX)

1. Open the relay-pubsub UI ( `/ui/` ) on `https://<host>:...` (see Admin basics for the default port).
2. Navigate to **Tests**.
3. Complete the on-screen fields / actions for this surface (Run healthz, smoke, and conformance from the browser.).
4. Use **Probe** / **Save** / **Send** (or the primary button on the page) and watch status chips.
5. **Empty / fail**: Check Admin basics env vars, JWT/ `API_TOKEN` , TLS insecure for lab certs, and backend reachability.
6. **Success**: Status shows healthy / accepted; related Lab or Logs surfaces reflect the change.

Never publish lab IPs — use `<host>` .
